Question 14

1 pts

What is given by the integral $\int_0^1 \pi^3 x^2 dx$?

- $\bigcirc \ \, \text{The arc length of} \quad y=\pi^3x^2 \quad (x\in [0;\, 1])$
- The volume of the solid by revolution $y = \pi x \quad (x \in [0; 1])$

about the x-axis

- \bigcirc The area of the surface by revolution $y = \pi^2 x^2 \quad (x \in [0; 1])$ about the x-axis
- \bigcirc The volume of the solid by revolution $y=\pi^2x^2 \quad (x\in [0;\ 1])$ about the x-axis

Question 15	1 pts
4.000.011.20	

The n-th Taylor-polynomial of a function $\mathbb{R} \to \mathbb{R}$ may be (n+1)-th degree in certain cases.

True

False

Question 2 1 pts

Choose the correct theorem about the differentiability and the derivative of the composition (Chain Rule).

$$\bigcirc$$
 Let $f,g:\mathbb{R}\to\mathbb{R}$, $g\in D\left(a
ight),\ f\in D\left(g\left(a
ight)\right).$ Then $f\circ g\in D\left(a
ight)$ and $\left(f\circ g
ight)'\left(a
ight)=f'\left(g\left(a
ight)
ight)\cdot g'\left(a
ight)$

- \bigcirc Let $f,g:\mathbb{R}\to\mathbb{R}$, $f,g\in D\left(a\right)$. Then $f\circ g\in D\left(a\right)$ and $\left(f\circ g\right)'\left(a\right)=f'\left(a\right)g\left(a\right)+f\left(a\right)\cdot g'\left(a\right)$
- \bigcirc Let $f,g:\mathbb{R}\to\mathbb{R}$, $f,\ g\in D\left(a\right)$. Then $f\circ g\in D\left(a\right)$ and $\left(f\circ g\right)'\ (a)\ =f'\left(a\right)\cdot g'\left(a\right)$
- \bigcirc Let $f,g:\mathbb{R} o \mathbb{R}$, $g \in D\left(a\right)$, furthermore $g\left(a\right) \in D_f$. Then $f \circ g \in D\left(a\right)$ and $(f \circ g)'\left(a\right) = f\left(g(a)\right) \cdot g'\left(a\right)$.

Give an example for a function $\,f:\mathbb{R} \to \mathbb{R}\,\,$ which is continuous at $\,a=0\,\,$ but it is not differentiable at this point.

$$f(x) = \begin{cases} 0 & \text{if } x < 0 \\ x & \text{if } x \ge 0 \end{cases}$$

$$\bigcirc f(x) = \begin{cases}
0 & \text{if } x < 0 \\
x^2 & \text{if } x > 0
\end{cases}$$

There is no such an example.

$$f(x) = \text{sign } x = \begin{cases} -1 & \text{if } x < 0 \\ 0 & \text{if } x = 0 \\ 1 & \text{if } x > 0 \end{cases}$$

Question 3 1 pts

A)
$$\partial_2 f(x, y) = \frac{2xy}{\frac{1}{x}}$$

$$(x,y) = \frac{1}{\frac{1}{x}}$$

$$B) \quad O_2 f(x,y) = \frac{1}{\ln x}$$

If
$$f \in \mathbb{R}^2 \to \mathbb{R}$$
, $f(x,y) = \frac{xy^2}{\ln x}$, then

A) $\partial_2 f(x,y) = \frac{2xy}{\frac{1}{x}}$

C) $\partial_2 f(x,y) = \frac{2xy \ln x - xy^2 \cdot \frac{1}{x}}{\ln^2 x}$

$$D) \quad \partial_2 f(x,y) = \frac{y^2}{\frac{1}{x}}$$
